SUMMARY

Detail-oriented Software Engineer and Full-Stack Developer with hands-on experience architecting robust web applications using the TALL stack (Tailwind CSS, Alpine.js, Laravel, Livewire) and MySQL. Proven track record in third-party API integration, backend logic optimization, and automating enterprise workflows. Leverages a strong foundation in Quality Assurance and white-box testing to write clean, highly scalable, and secure code from initial design through deployment.

EXPERIENCE AND TECHNICAL PROJECTS

Asia United Bank

Information Security Management Intern

January 2026 – May 2026

- Engineered scalable Google Apps Script automations to standardize the Collection of Information Assets (CIA) across 150+ branches, eliminating manual configuration errors and enforcing strict data accuracy.
- Developed and deployed dynamic graphical dashboards to visualize Tenable and Qualys metrics, centralizing and streamlining enterprise-level security reporting.
- Optimized Third-Party Risk Management (TPRM) technical controls and verified Palo Alto and Forcepoint firewall rule sets for compliance.

Canopy Farm PH Rental Management System

Lead Developer and Project Manager

March 2023 – May 2026

- Architected and developed a comprehensive web-based rental management platform from the ground up using the TALL stack and MySQL, ensuring a responsive UI and scalable backend architecture.
- Integrated the PayMongo API to facilitate secure, real-time online payment processing, programming robust error handling and edge-case resolution for seamless transaction workflows.
- Refactored core backend logic and optimized complex database queries, significantly improving system performance to reliably accommodate high concurrent user traffic.
- Spearheaded Agile development cycles using Jira, managing version control via Git/GitHub, resolving critical codebase defects, and automating booking workflows to reduce operational errors by ~80%.

PUP Taguig Admission System (PUPTAS)

Backend Maintenance Developer

August 2025 – May 2026

- Maintained and optimized backend system architecture using Laravel and MySQL, proactively resolving performance bottlenecks to ensure continuous operational uptime for the university admission portal.
 - Monitored application server logs and reinforced database integrity safeguards, successfully preventing system crashes and data loss during high-traffic student enrollment periods.
-

EDUCATION

Polytechnic University of the Philippines – Taguig Campus

Bachelor of Science in Information Technology

2022 - 2026

- Achievement:** Consistent President's Lister
 - Organization:** PUP Ugat ng Kamalayang Aktibo sa Wika - Executive President
-

TECHNICAL SKILLS

Languages & Frameworks: PHP, JavaScript, Java, C++, TALL Stack (Tailwind CSS, Alpine.js, Laravel, Livewire), MVC Architecture.

Databases & APIs: SQL / MySQL, PayMongo API, RESTful API Integration.

Development & Version Control: Git/GitHub, Jira, Unity, Visual Studio, Google Apps Script.

Quality Assurance & Optimization: Code Refactoring, White-Box Testing, Unit & Integration Testing, Database Query Optimization.

CERTIFICATIONS

Introduction to Software Testing - Coursera

Completion: July 2026
